Digital Literacy

Name: Nabhya Navale
Reg No: 25BSA10182
Branch: B.Tech
Year: 1st Year
Course Code: CSE0001

Introduction

Digital literacy is a necessary skill in today's world because we are using technology all the time. I have been given a project to learn how to use technology in a proper way, how to be professional online, and how to stay safe online. As a Student Digital Ambassador, I have done a number of things, including creating an infographic and creating a digital portfolio. I have also learned about different online platforms and how to write proper emails and how to deal with cyber crime. This project has been really helpful to me because I have learned a number of things, and I understand digital communication and safety better now.

Task 1: Digital Literacy Infographic

I made an infographic about digital literacy using an online tool. This digital literacy infographic is about what digital literacy is. It has some tools for students, and it has safe internet practices. I made it look nice and simple so it is easy to understand. I made it easy to read by using headings and icons, which made it an easy digital literacy infographic to read.

One cool thing about doing this task is learning how to show information using pictures of writing a lot of words. This helped me to be creative. This helped me with my design skills. At first, it was a little hard to fit it all on one page. This task helped me see how important it is to use pictures and things to show information so people can understand it. This digital literacy infographic is to show people about digital literacy and how to share information using pictures.

Task 2: Digital Portfolio

In this task, I created my digital portfolio using platforms such as LinkedIn, ResearchGate, and Kaggle to build a strong online professional presence. LinkedIn helps in showcasing professional skills, achievements, and connecting with industry professionals. It is widely used for networking and career opportunities.

ResearchGate is an effective platform for sharing research work and exploring the research of others. It allows students to gain knowledge and stay updated in their academic fields. Kaggle is a useful platform for learning data science and machine learning through datasets, projects, and competitions.

As part of this task, I created and optimized my LinkedIn profile by adding my educational details, skills, and interests. I also included a proper summary to reflect my goals and learning journey. Additionally, I added relevant content and links to highlight my work and improve my profile visibility.

This task helped me understand the importance of building a professional digital identity and maintaining an active online presence for future career growth.

Task 3: Coding & Collaboration Platforms

For this task, I looked at HackerRank and Google Forms. HackerRank had a coding problem for a beginner. It helped me get the hang of solving problems. It helped me understand how coding websites work. In the part where I had to make a quiz with five questions using Google Forms, the quiz is about being safe and knowing how to use digital tools.

This quiz will help students know how much they know about using the internet and digital tools. I also looked at the answers, which are in Google Sheets. These websites will help me at school. They will help me improve at coding. They will also help me work with others and collect data easily. This task gave me an opportunity to try out tools that are really helpful.

Task 4: Email Etiquette & Communication

In this task, I learned how to write emails and how to communicate online. I wrote two emails: one to ask for time to do an assignment and another to apply for a job. The emails had a subject, greeting, message, and closing. I also wrote a list of media dos and don’ts to practice good behavior online. Bad communication may lead to trouble in school and at work.

Proper use of words and proper etiquette are important in communication. This task helped me understand the importance of communication and how to show myself in the right way online and in social media. I learned to be careful of my words and actions online. Good communication helps to avoid confusion.

Task 5: Cybercrime Awareness

In this task, I worked as a Digital Ambassador to create awareness about cybercrime and promote safe online practices among students. I selected **ransomware** as the topic for my case study because it is one of the most serious and rapidly growing cyber threats.

Ransomware is a type of malicious software that blocks access to a system or encrypts important data, and then demands payment (ransom) from the victim to restore access. For this task, I prepared a detailed case study explaining how ransomware attacks typically occur, such as through phishing emails, malicious downloads, or unsafe websites. I also described the common targets, including students, individuals, and organizations, and the consequences like data loss, financial damage, and privacy risks.

In addition, I created a “Stay Safe Online” prevention checklist focused on protecting users from ransomware attacks. The checklist includes practical steps such as avoiding suspicious links, regularly updating software, and maintaining data backups. I also included official reporting channels like the National Cyber Crime Portal and helpline number 1930 to ensure timely reporting in case of an attack.

Through this task, I developed a better understanding of cybersecurity risks and the importance of preventive measures. It has made me more cautious and responsible while using digital platforms.

Conclusion

Overall this project helped me understand how important it is to be good with stuff, in today's life. I learned how to use tools to talk professionally online and stay safe on the internet. Each task gave me knowledge that will help me with school and my future job. This project also made me more confident when using platforms. I will keep using these skills in the future.
